

# *Biotechnology* **GEL FILTRATION**

- **Gel Filtration is a chromatographic technique where scientists separate one substance from another by a process known as filtration.**
- **Purification of molecules based on size is used in the manufacture of foods and medicines as well as in scientific research and medical labs.**
- **This technique is utilized in the growing field of proteomics, which is the characterization of proteins found within cells.**

**Did you know that rigorous science training will make you more competitive for ANY type of job? Employers know that students who can tackle hard science will do well with almost ANY challenges presented them.**

## **GOT SCIENCE? GET AHEAD!**
