

## CHAPTER 10

### Across

- 6 Recognizes short sequence of nucleotides in DNA and cleaves it
- 7 Locate a gene or mRNA molecule in a cell
- 8 Making of identical copies

### Down

- 1 Enzyme that joins two segments
- 2 Shows the location of DNA cutting sites
- 3 Complementary nucleic acid strands are allowed to bind
- 4 Amplify specific regions of DNA
- 5 A collection of cloned molecules
