

## CHAPTER 8

### Across

- 6 A protein that permits transcription of an adjacent gene
- 7 Complex of DNA histones
- 9 Structure where rRNA is transcribed
- 10 DNA replication begins
- 11 Gene exerts its effect

### Down

- 1 Site where transcription is initiated
- 2 End of a chromosome
- 3 Cell changes to a distinctive specialized character
- 4 Basic protein associated with DNA
- 5 Prevents transcription of an adjacent gene
- 7 Holds sister chromatids together
- 8 DNA wound around a protein core
