APICS BASICS OF SUPPLY CHAIN MANAGEMENT

This course addresses the basic concepts and tools used in managing the flow of materials from suppliers to customers. The purpose of this course is to introduce basic supply chain concepts and terminology, as related to operations planning and control activities including: demand management, forecasting, master planning, material and capacity planning, production activity control, purchasing, inventory management, distribution, quality, Lean/JIT, and Theory of Constraints. Also discussed are the relationships and interfaces among the various supply chain activities.

PREREQUISITES:
Basics of Supply Chain Management is the recommended prerequisite for the remaining four CPIM training modules Master Planning of Resources, Detailed Scheduling & Planning, Execution & Control of Operations, and Strategic Management of Resources.

AUDIENCE:
This course is the foundation module in the APICS CPIM certification series. It is intended for Operations and Supply Chain professionals who want to improve their professional knowledge and skills in and master the APICS Body of Knowledge terminology and concepts. It is the recommended prerequisite for the other four CPIM certification modules (shown below). This course is highly recommended for anyone pursuing their APICS CPIM certification.

Class Format: Mondays, 4:30 p.m. to 8:30 p.m. (35 hours)

Cost: $600.00

APICS Basics of Supply Chain Management
Monday, October 13, 2014 4:30 PM - Monday, December 08, 2014 8:30 PM (Pacific Time)

College of the Canyons
26455 Rockwell Canyon Road
Santa Clarita, California 91355
United States

Description
This course addresses the basic concepts and tools used in managing the flow of materials from suppliers to customers.

APICS Execution and Control of Operations (ECO)

This course is one of five modules in the APICS CPIM certification series. It is intended for Operations and Supply Chain professionals who want to improve their knowledge and skills in operations and Supply Chain Management and master the APICS Body of Knowledge terminology and concepts.

COURSE CONTENT:

This course addresses the principles and practices of scheduling, controlling, and measuring operations in all types of manufacturing environments (job shop, batch, flow, and process production). It explains techniques for scheduling and controlling intermittent production and process operations. It also addresses the execution of quality initiatives, elimination of waste, continuous improvement. The three main topics of this course are:

- Prioritization and sequencing of work to be performed
- Executing work plans and implementing physical controls
- Performance reporting and feedback

Class Format: Tuesdays, 4:30 p.m. to 8:30 p.m. (35 hours)

Cost: $600.00
