

Mac OS X - Safari 10 - Silverlight Plugin 5.1.5 - Colleague UI (aka Datatel)

The latest version of Safari now requires an extra step to allow your browser plugin to function as intended. The primary system affected is the campus Colleague (aka Datatel) web service. These additional steps will get you back up and running with the Colleague UI web service on an apple computer. These instructions are only for your Safari browser.

Open **Safari**

Select the **Safari** Menu in the Task Bar

Click on **Preferences...**

Click the **Security** Tab

Select the **Plug-In Settings...** Button

Check the box next to the **Silverlight** Plugin
Locate the website you're looking to enable the plugin for and change the Off drop down to ON
